PINAY Seedling Nursery

Pilipino Intensive Natural Agriculture Nursery

Harbest Agritech has been actively teaching ordinary vegetables farmers on the proper way of sowing and growing healthy vegetable seedlings. Healthy seedlings provide better income opportunity as it is claimed they are fifty percent (50%) of successful vegetable farming!

Harbest Agri+Engineering have developed an economical yet very effective seedling nursery greenhouse that can protect vegetable seedlings during rainy days and strong windy days. This model was developed from very popular Maligaya-Type greenhouse used for the protective culture training module of Harbest for off-season planting of high-value vegetables.

Natural Farming practices using EM technology from Japan and seedling production technique from Taiwan are applied to produce quality seedlings for barangay-based farmers.

All technical drawing and training modules are properties of Harbest Agribusiness Corporation and should have prior written approval from Harbest if used by other parties.
